***Examination of Application #09/590,696***

1. Claims 1-20 of application 09/590,696, filed on 9-June-2000, are presented for examination.

***Double Patenting Rejections***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321<sup>©</sup> may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

In re Application of: KULL

3. Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-42 respectively of U.S. Patent No. 6,217,126, issued to Kull on 17-April-2001, entitled *Railway Emulation Brake*. Although the conflicting claims are not identical, they are not patentably distinct from each other because the methods of the present invention and the methods of the patent are each directed to a system (or method) for [see especially claim 11 of the present application, and claim 25 of Patent No. 6,217,126] electronically controlling a brake pipe pressure in a train having an electronically controlled pneumatic (ECP) end of train (EOT) pneumatic emulation system, wherein a brake pressure is detected and controlled from an electronic controller aboard the locomotive.
